rohangupta.0927@gmail.com | (647)-786-1145

Education

University of Waterloo Computer Engineering

B.A.Sc Engineering
Class of 2021

White Oaks Secondary School

Earned the **International Baccalaureate**
(IB) Diploma

Languages

Proficient: C++, HTML, CSS, Sass

Working Knowledge: Java, Swift, Python,
JavaScript, Assembly, MATLAB

Familiar: C#, VHDL

Software

Frameworks: jQuery, Bootstrap,
Knockout.js, Materialize

Libraries: Pygame, Selenium, jMeter

IDE: Android Studio, Xcode, Visual Studio,
Team Foundation Server, Unity, Eclipse

Tools: Git, Arduino, Leap Motion, FBGA
Design, CAD Tools

Architectures: MVVM, MVC

OS: Android, iOS, Windows, Unix

Volunteer

Kumon (2013-2015)

Tutor & Marker

Tutored children in English and
Mathematics, resulting in improved
confidence and ability in these subjects.
Maintained high energy pressure and busy
work environment.

Work Experience

Cineplex Entertainment (2018)

Application Software Developer

- Participated in the development and maintenance of production-ready Cineplex Store mobile applications.
- Wrote high-quality and maintainable code using Swift for iOS and Java for Android applications.
- Completed tasks as fast and efficiently as possible to cut deployment time down from **4 weeks to 2 weeks**.

Cineplex Entertainment (2017)

Software Developer

- Developed front-end of the Cineplex Store website redesign using HTML, CSS, Sass, and Javascript.
- Increased store revenue and web traffic by making the website more aesthetically-pleasing and accessible with around **300000 unique visitors** every month.
- Made from wireframes/designs and stakeholder input.

Cineplex Entertainment (2017)

Quality Assurance Analyst

- Reviewed project requirements and created corresponding test plans and test cases.
- Performed manual testing of current Cineplex Store applications across a wide range of connected devices.
- Created automated test scripts for smoke and regression testing using Selenium and jMeter.

Projects

Surgeon's Helping Hand – C++, HTML (2018)

Won **Best Healthcare Hack at DeltaHacks**. Created robotic hand that mimics hand gestures recorded by a Leap Motion, then sends the data through the web to an Arduino.

HumIt – Java, Javascript (2017)

A windows application made at **HackTheNorth** that recognizes a song by a hum sung to Cortana. Fast Fourier Transform was used to convert frequencies into musical notes which were compared to musical notes from songs stored in a database.

Gesture-Controlled 2048 – Java (2017)

Android application made in Android Studio that refines raw sensors on cellphone to recognize hand gestures and creates a virtual object that reacts to this using pseudo physics and animations.

Garbage Shooter – Python (2016)

Created a simple and addictive computer game that allowed users to aim their garbage into a garbage can until they missed, in which case, the score would be saved and ranked.
